

Remanufactured Lift Truck Parts

Remanufactured Lift Truck Parts - Lift trucks are very expensive pieces of equipment. A 5000lb new electric model can cost between \$18,000 to \$25,000 and several thousands of dollars more would be needed for a battery and a battery charger. The same internal combustion forklift of similar lift capacity would cost a little less and the diesel models that are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are an alternative so as to save a large amount of money since they cost less than half the price of brand new models.

Some people think they will deal with more maintenance issues if they purchase a reconditioned lift truck and are skeptical of purchasing a second-hand lift truck at a sale price. A correctly reconditioned lift truck will work just in addition to a new one and any doubts of upkeep are unfounded. Although your lift will get heavy use, as long as you take good care of the machinery, it will serve your requirements and likely save you lots of cash.

It is essential to determine what the seller means by a refurbished or reconditioned lift truck when thinking about purchasing a used forklift. Lots of businesses do a really good job reconditioning a model before selling it. This consists of disassembling the lift truck, rebuilding the engine, sandblasting the lift and afterward reassembling the whole thing and finishing with a fresh coat of paint.

To properly and thoroughly rebuild a forklift engine, a good company will entirely disassemble it. A heat cleaning system could then be utilized to clean all the components. When this step has been done, all of the components are checked to see if they have any breakage, any extensive wear or any defects. Some components like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are reground, resurfaced and resized if needed. Several parts like gears, nuts, bolts etc. are replaced or repaired as needed.

As soon as the overhaul has been done, the engine is rebuilt manually. After being reassembled, a series of tests are applied to the working machine so as to check all of the parts and make positive there are no leaks or problems. If any problems occur, the needed modifications are done.

There is no reason to be concerned about obtaining reconditioned lift trucks from quality sellers. The process the machinery go through to be rebuilt guarantees the utmost reliability. Upkeep costs can truly work out to be less because you would avoid the initial phase of higher maintenance projections that a new lift truck has as it is broken in. By following routine upkeep schedules and taking care of the machinery correctly, a reconditioned forklift would serve you well.
